# Maryland Teacher Technology Standards

<table>
<thead>
<tr>
<th>Standards and Outcomes</th>
<th>Indicators</th>
</tr>
</thead>
</table>
| I. Information Access, Evaluation, Processing and Application | 1. Identify, locate, retrieve and differentiate among a variety of electronic sources of information using technology.  
2. Analyze issues related to the uses of technology in educational settings.  
3. Establish classroom policies and procedures that ensure compliance with copyright law, Fair Use guidelines, security, privacy and student online protection.  
4. Use appropriate technology to share results and solutions with others, such as parents and the larger community. |
| II. Communication | 1. Use telecommunications to collaborate with peers, parents, colleagues, administrators and/or experts in the field.  
2. Use productivity tools to publish information.  
3. Use multiple digital sources to communicate information online. |
| III. Legal, Social and Ethical Issues | 1. Identify ethical and legal issues using technology.  
2. Establish classroom policies and procedures that ensure compliance with copyright law, Fair Use guidelines, security, privacy and student online protection.  
3. Use appropriate technology to share results and solutions with others, such as parents and the larger community. |
| IV. Assessment for Administration and Instruction | 1. Research and analyze data related to student and school performance.  
2. Apply findings and solutions to establish instructional and school improvement goals.  
3. Use appropriate technology to share results and solutions with others, such as parents and the larger community. |
| V. Integrating Technology into the Curriculum and Instruction | 1. Assess students’ learning/instructional needs to identify the appropriate technology for instruction. |
III. Legal, Social and Ethical Issues

What is your Interpretation?

• Demonstrate an understanding of the legal, social and ethical issues related to technology use

1. Identify ethical and legal issues using technology.
2. Analyze issues related to the uses of technology in educational settings.
3. Establish classroom policies and procedures that ensure compliance with copyright law, Fair Use guidelines, security, privacy and student online protection.
4. Use classroom procedures to manage an equitable, safe and healthy environment for students.

MTTS
Developed from Maryland’s Preparing Tomorrow’s Teachers to Use Technology (PT3), USDOE Catalyst Grant, May 2002.
Performance assessment materials to be available for each standard on the PT3 website: www.smcm.edu/msde-pt3/. Any use of these materials should credit Maryland’s PT3 Catalyst Grant P342A990201.
III. Legal, Social and Ethical Issues

What is your Interpretation?

• Demonstrate an understanding of the legal, social and ethical issues related to technology use

1. Identify ethical and legal issues using technology.
   • Digital and Urban Divide
   • Access Issues
   • Cultural Differences in Multimedia
   • AT and 508/Comar Regulations

MTTS

Case Study and Questions

Case Study

You are a student teacher at Greater Maryland Middle School. Today you are observing Mrs. Jones teaching her social studies class in the computer lab. Her first period is her planning period. She has asked you to assist her with setting up the lab for her lesson plan. She is installing the school’s only copy of an atlas software program for a single user license on the 22 computers in the lab. She explains that her lesson will require students to download information about the country they have been assigned from the atlas program and to also search the Internet for more information for a PowerPoint presentation. Mrs. Jones encourages students to freely use any information from the Internet for their presentation.

At the beginning of each class, the students enter and sit where they choose, occasionally arguing over seats. For the four classes with more than 22 students, Mrs. Jones pairs a boy and a girl, assigning the boy to operate the computer and the girl to take notes. Mrs. Jones starts the class by sharing a model of a final product, a PowerPoint presentation. Without guidance, she encourages the students to freely copy any graphics and text from the Internet to brighten up their slides. She explains that they will have one day in the computer lab to complete the assignment and that, if at home within two days, she directs them to use the country assigned to them. At the completion of class...

Copyright Quiz

Hall Davidson's
Copyright Primer

Fair Use Copyright Quiz

by Hall Davidson

1. Basically, copyright law was created in this country to protect individuals and companies from having their work ripped off.  
   True/False

2. The owner of the local Blockbuster Video store supports the school by donating one videotape rental-free to the school every Friday. The video is shown in the multi-purpose room to reward students with perfect attendance that week. It does improve attendance. This falls under “fair use.”  
   True/False

3. (a) A teacher buys a single-user program with department money and puts it on the Local Area Network (LAN). It is frequently used by several teachers at the same time. This is done in violation of a written district policy against using single-user programs on the LAN. After two years, the software company takes action against the individual teacher. The district is also liable.  
   True/False
   (b) The Adobe user license allows ten versions of PageMaker to be spread across twenty-five machines as long as no more than ten users ever use the program simultaneously.  
   True/False
   (c) This and similar licenses, once agreed to, are binding in court.  
   True/False

4. On her home VCR, a history teacher taped the original ABC news report of Nixon leaving the White House after resigning. She uses the entire news program every year in her classroom. This is fair use.  
   True/False

Maryland Technology Performance Task III

III. Legal, Social and Ethical Issues

A. Detailed Task Information

In Technology Standard III, Legal, Social and Ethical Issues, each teacher candidate will demonstrate an understanding of the legal, social and ethical issues related to technology use.

B. Scoring Tool

It is recommended that the teacher candidates use the scoring tool as a self-assessment before submitting the final product to the instructor. Score only the numbered elements by considering the rubric under that heading.

10 Big Myths about copyright explained

An attempt to answer common myths about copyright seen on the net and cover issues related to copyright and USENET/internet publication.

- by Brad Templeton

Note that this is an essay about copyright myths. It assumes you know at least what copyright is -- basically the legal exclusive right of the author of a creative work to control the copying of that work. If you didn’t know that, check out my own brief introduction to copyright for more information. Feel free to link to this document, no need to ask me. Really, NO need to ask.

1) "If it doesn't have a copyright notice, it's not copyrighted."

This was true in the past, but today almost all major nations follow the Berne copyright convention. For example, in the USA, almost everything created privately and originally after April 1, 1999 is copyrighted and protected whether it has a notice or not. The default you should assume for other people's works is that they are copyrighted and may not be copied unless you know otherwise. There are some old works that lost protection without notice, but frankly you should not risk it unless you know for sure.

It is true that a notice strengthens the protection, by warning people, and by allowing one to get more and different damages, but it is not necessary. If it looks copyrighted, you should assume it is. This applies to pictures, too. You may not scan pictures from magazines and post them to the net, and if you come upon something unknown, you shouldn’t post that either.

The correct form for a notice is:

“Copyright [dates] by [author/owner]”

http://www.templetons.com/brad/copymyth.html
©Primer

The © Primer is an introduction to issues concerning copyright ownership and use of information. The interactive tutorial overviews the underlying principles behind copyright in the United States, outlines the requirements for copyright protection as well as discusses the parameters of use and access of copyrighted material.

The © Primer is intended to introduce both creators and users of information to the nuts and bolts of copyright law. Consisting of twenty-one questions and answers, the © Primer includes illustrative scenarios and resources for further information and study.

To enter the © Primer select the ENTER link or view the FAQ for tips on navigation and explanations of © Primer functions. You will need a Javascript enabled browser and the Flash Player utility to view the primer.

Getting Started

The Copyright Crash Course Online Tutorial will help you learn about how ownership of copyrighted materials works, what is fair use and when and how to get permission to use someone else’s materials. The Tutorial pages include links to pages in the Copyright Crash Course and to copyright law. Please read these materials to get the information you will need to correctly answer the 12 questions at the end of the Tutorial. In order to earn a Crash Course Certificate, you must answer all 12 Test questions correctly.

While we would encourage you to go through the Tutorial in its entirety before taking the Test, you may take or retake the Test at any time. The Test Results will tell you what you need to review if you miss a question, so you do not have to take the entire Tutorial over if you just miss a few questions. You will, however, have to take the Test over each time you fail to answer all questions correctly.

Please choose a version from the options below.

Copyright Tutorial cont.

The four fair use factors:

1. What is the character of the use?
2. What is the nature of the work to be used?
3. How much of the work will you use?
4. What effect would this use have on the market for the original or for permissions if the use were widespread?

FACTOR 1: What is the character of the use?

- Nonprofit
- Educational
- Personal
- Criticism
- Commentary
- Newsreporting
- Parody
- Otherwise "transformative" use

Uses on the left tend to tip the balance in favor of fair use. The use on the right tends to tip the balance in favor of the copyright owner in favor of seeking permission. The uses in

• Discuss the quality of a few of the sites above and the materials gained. How easy were the sites to navigate? What levels were the sites targeting? Were you able to find papers/materials that met your specific needs? Rate the quality of the materials located. How easy would it be for a student to access the materials?
Plagiarism Snippets: Warm-ups

You may have lithium-ion batteries from your cellular phones and laptop computer applications. Experts say these applications will continue to drive large sales gains, but technical limitations may make new applications, such as for the rechargeable batteries.

Chemistry is the key to lithium-ion batteries. Lithium-ion batteries work using simple reversible electrochemical reactions. While the battery is charging, positive lithium ions from a lithium metal inside cathode—usually lithium cobalt oxide—move through a barrier to a graphite anode. While the battery is being discharged, the ions flow back to the cathode.

Though much of this technology was developed in the U.S., the lithium-ion battery industry's center of mass quickly crossed the Pacific to Japan. Major battery makers include Sony, Panasonic, Samsung, and Toshiba.

The electrolyte in lithium-ion batteries serve as an example of why supplies need specialized chemistry expertise. The major electrolyte in use is LiPF₆. To make this, producers must handle hydrofluoric acid, F₆O₇, and to produce electrolyte but withdraw because of environmental concerns.

Another concern with lithium-ion batteries is the exothermic reactions they produce can evolve in high temperatures, causing a positive feedback effect called "thermal runaway." Because lithium batteries use an organic solvent with relatively low flash point thermal management is a severe safety concern. It has led lithium-ion

Posted by Davina Pruitt-Mentle (EDUC478) on Saturday, April 17, 2004 10:21am

Attached are two short 1 page papers that were submitted to a chemistry teacher. Students were asked to research and write about the structure and chemical content of batteries—and the chemistry behind how batteries work. The two attached papers raised red flags to the teacher.

Read the papers submitted. Analyze why the teacher might think these papers have been plagiarized (i.e., what are some of the red flags)? Then using the strategies discussed in the reading try to find the sources and materials that were plagiarized.

(NOTE: The names have been changed but these were actual products that were submitted to me in my earlier life as a chemistry teacher.)

Cybersafety
Phishing For Worms!

Just What Are Worms, Adware, Spyware, and Phishing Expeditions?
Definitions

- **Worm**: a self-replicating computer program, similar to a computer virus. It is self-contained and does not need to be part of another program to propagate itself.
  - Example: Sobig and Mydoom.

- **Virus**: attaches itself to, and becomes part of, another executable program;
  - Macro viruses are written in the scripting languages for Microsoft programs such as Word and Excel.

- In general, a virus cannot propagate by itself whereas worms can. A worm uses a network to send copies of itself to other systems and it does so without any intervention. In general, worms harm the network and consume bandwidth, whereas viruses infect or corrupt files on a targeted computer. Viruses generally do not affect network performance, as their malicious activities are mostly confined within the target computer itself.

Definitions

- **Trojan Horse**: A malicious program that is disguised as legitimate software
  - These are often those attachments to email that entice you to open them

- **Malware**: Software designed to infiltrate or damage a computer system, without the owner's consent
  - Includes computer viruses, Trojan horses, spyware and adware
What to do

- **Signs of infection**
  - May seem sluggish or slow down significantly
  - Might ‘lock up’ more often than usual
  - Browser program may not work correctly
  - Pop-up ads
  - Unusual hard drive activity

- **Ways to get rid of**
  - Use your anti-virus software (you have one right!!!)
    - Scan all your drives
  - Use Microsoft Malicious Software Removal Tool
  - McAfee: [http://ts.mcafeehelp.com/?siteID=1&resolution=1280x1024&rurl=vrContactOptions.asp](http://ts.mcafeehelp.com/?siteID=1&resolution=1280x1024&rurl=vrContactOptions.asp)
Chain Letter Hoax

- **Definition:** An email which urges the recipient to forward the email to other people

- **DEAR SIR,**

URGENT AND CONFIDENTIAL BUSINESS PROPOSAL

I AM MARIAM ABACHA, WIDOW OF THE LATE NIGERIAN HEAD OF STATE, GEN. SANI ABACHA. AFTER THE DEATH OF MY HUSBAND WHO DIED MYSTERIOUSLY AS A RESULT OF CARDIAC ARREST, I WAS INFORMED BY OUR LAWYER, BELLO GAMBARI THAT, MY HUSBAND WHO AT THAT TIME WAS THE PRESIDENT OF NIGERIA, CALLED HIM AND CONDUCTED HIM ROUND HIS APARTMENT AND SHOWED HIM FOUR METAL BOXES CONTAINING MONEY ALL IN FOREIGN EXCHANGE AND HE EQUALLY MADE HIM BELIEVE THAT THOSE BOXES ARE FOR ONWARD TRANSFER TO HIS OVERSEAS COUNTERPART FOR PERSONAL INVESTMENT.

ALONG THE LINE, MY HUSBAND DIED AND SINCE THEN THE NIGERIAN GOVERNMENT HAS BEEN AFTER US, MOLESTING, POLICING AND FREEZING OUR BANK ACCOUNTS AND EVEN MY ELDEST SON RIGHT NOW IS IN DETENTION. MY FAMILY ACCOUNT IN SWITZERLAND WORTH US$22,000,000.00 AND 120,000,000.00 DUTCH MARK HAS BEEN CONFISCATED BY THE GOVERNMENT. THE GOVERNMENT IS INTERROGATING HIM (MY SON MOHAMMED) ABOUT OUR ASSET AND SOME VITAL DOCUMENTS. IT WAS IN THE COURSE OF THESE, AFTER THE BURIAL RITE AND CUSTOMS, THAT OUR LAWYER SAW YOUR NAME AND ADDRESS FROM THE PUBLICATION OF THE NIGERIAN BUSINESS PROMOTION AGENCY. THIS IS WHY I AM USING THIS OPPORTUNITY TO SOLICIT FOR YOUR CO-OPERATION AND ASSISTANCE TO HELP ME AS A VERY SINCERE RESPONSIBLE PERSON. I HAVE ALL THE TRUST IN YOU AND I KNOW THAT YOU WILL NOT SIT ON THIS MONEY.
More Definitions

• **Adware**: Software package which automatically plays, displays, or downloads advertising material to a computer after the software is installed on it or while the application is being used.

• **Spyware**: designed to intercept or take partial control of a computer's operation without the informed consent of that machine's owner or legitimate user.
What to do

• Signs of infection
  – An affected computer can rapidly become infected with large numbers of spyware components.
  – Pop-up advertisements
  – Unwanted behavior and degradation of system performance.
  – Significant unwanted CPU activity, disk usage, and network traffic
    • Slows down other programs
    • Stability issues—application or system

• Ways to get rid of or protect
  – Anti-spyware programs
    • OptOut
    • Ad-Aware SE
    • Spybot - Search & Destroy
Definitions

• **Spamming**
  – Sending of unsolicited bulk unsolicited e-mail and received by multiple recipients

• **Solutions**
  – Source-based blocking solutions prevent receipt of spam
  – Content filtering solutions identify spam after it’s been received
  – Disposable identities

• **Spoofing**
  – one person or program successfully pretends to be another by falsifying data and thereby gains an illegitimate advantage
  – “Webpage spoofing,” : a legitimate web page such as a bank’s site is reproduced in "look and feel" on another server under control of the attacker. They fool users into thinking they are connected to a trusted site, to gather user names and passwords.
Identity Theft

- **Phishing**
  - Phishing is a popular and growing method of identity theft, typically performed either through email or through the creation of a Web site that appears to represent a legitimate company. Victims are asked to provide personal information such as passwords and credit card numbers in a reply email or at the bogus Web site.

- **Pharming**
  - A scamming practice in which malicious code is installed on a personal computer or server, misdirecting users to fraudulent Web sites without their knowledge or consent. Pharming has been called "phishing without a lure."

- **“Spear phishing”** the practice of targeting an attack to a specific group is gaining in sophistication and frequency.
Identity Theft

The Federal Trade Commission reports that identity theft now affects more than 10 million people every year representing an annual cost to the economy of $50 billion

C3™ Institute

Cyberethics, Cybersafety, & Cybersecurity (C3™) Institute

Welcome to the C3™ Institute

The Cyberethics, Cybersafety and Cybersecurity (C3™) Institute provides outreach services to the educational community about the ethical, legal, safety, and security implications of technology use.

Our goals are:

1. raise community awareness of ethical, legal, safety, and security implications of technology use [more]
2. provide guidance to parents, educators, students and policy makers regarding effective strategies, techniques and protocols to assist themselves and young people in gaining the knowledge and skills about ethical, legal, safety, and security implications of technology use [more]
3. provide professional development opportunities for educators [more] and
4. help increase the workforce pipeline of information security, information assurance and information technology professionals in the MD/VA/DC area and nationwide [more]

April is Cyberawareness Month!

Setting your clocks forward or back for Daylight Saving Time and replacing the batteries in smoke detectors are rituals repeated every spring and fall. Similarly, the National Cyber Security Alliance established April 4, 2006, as Cyber Security Day to raise awareness about Internet safety and computer security issues (EDUCAUSE, 2006). While colleges and universities across the country planned security education and awareness events to help promote Cyber Security Day, Educational Technology Outreach planned a month’s worth of activities to help the K-20 community’s awareness of cybersecurity issues and promote safe online practices.

- Rutgers University is encouraging its students, faculty, and staff to “Spring Ahead to Security!” on a Web site devoted to National Cyber Security Day.
- University of Maryland’s Project NetIsis and CIT promoted “Spring Cleaning: Computers Need IT Too!” through print and web based resources and a student awareness event.
- The George Mason University IT Security Office featured a week-long lineup of lunchtime presentations promoting cyber security awareness.
- The University of Arizona developed a series of humorous posters to reinforce messages that are designed to prevent identity theft and other consequences of improperly secured computers.
- The Office of Information Technologies at the University of Virginia has published on the topic of developing campus-wide security education and awareness in EDUCAUSE Quarterly [PDF - 57KB] and serves as part of the Virginia Alliance for Secure Computing and Networking (VASCAN) that has compiled a collection of security tools and best practices from Virginia universities.

First held in 2002, the semi-annual National Cyber Security Days are coordinated with daylight savings in April and October in the U.S. and are intended to raise the public’s awareness of cybersecurity issues and promote safe online practices. Read on to find out more about National Cyber Security Day.
